

LIFE CARE
HOSPITAL (LCH™)
Caring for Lives

Date:09/05/2018

Dear Sir or Madam,

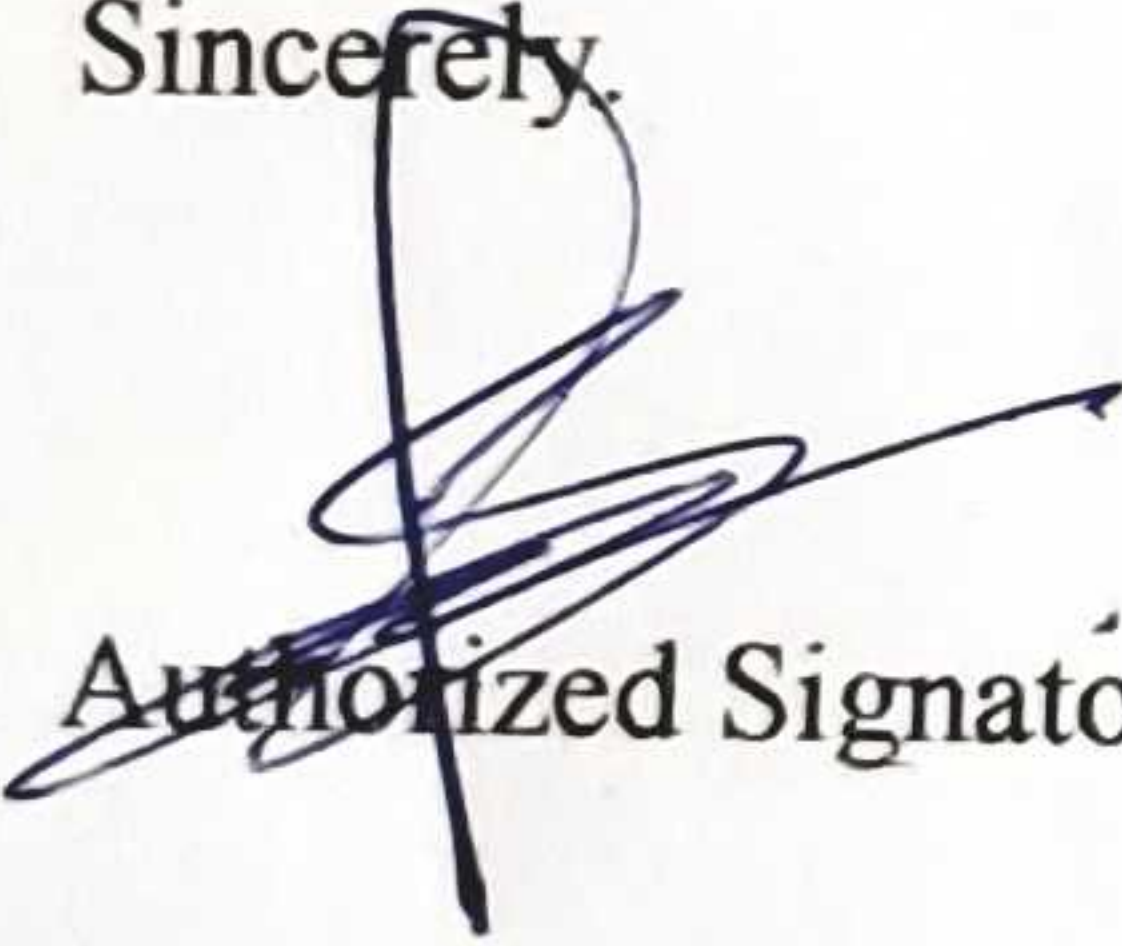

We have been using ten3T's **Cicer vitals monitoring system for patients** in our hospital and have derived life saving value from it. Cicer is a wearable smart patch that is easy to use by our nursing staff. It has enhanced our ability to provide ICU quality care to all of our patients, including patients in general wards and post operative recovery rooms.

Patient vitals signs are accessible to all of our physicians remotely, wherever they are. This allows our specialists to keep track of their patients after procedures and for other critical times of observation. The wearable patch is comfortably worn by the patient, and allows full mobility.

We have been able to detect and intervene during events such as respiratory distress, hypoxemia, and tachycardia immediately.

The Cicer vitals monitoring system helps detect events early, and helps improve patient care and recovery across the hospital. It is an accessible, affordable, and high quality medical technology.

Sincerely,

Authorized Signatory
